

EnBW's SBTi-validated carbon reduction targets

EnBW's reduction targets are consistent with the Paris Climate Agreement and the 1.5 °C target.

EnBW plans to become climate neutral in the Scope 1 and 2 emission categories by 2035. Remaining emissions will be neutralized by using recognized carbon offset projects.

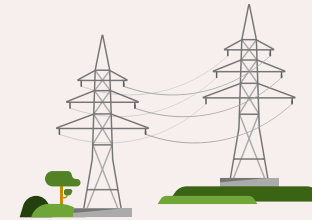

SCIENCE
BASED
TARGETS

DRIVING AMBITIOUS CORPORATE CLIMATE ACTION

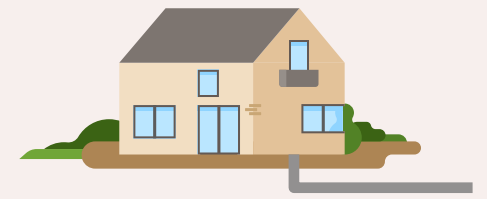

Scope 1

Direct emissions from EnBW-owned electricity and heat generation plants

Scope 2

Indirect emissions transmission and distribution of energy by subsidiaries (grid loss emissions)

Scope 3

Indirect emissions from gas procurement and from gas combustion at end customers

2035

Reduction in absolute emissions by

83%

(relative to 2018 base year)

2035

Reduction in absolute emissions from gas activities by

43%

(relative to 2018 base year)
